|-------------|------------------|-------------|

## Water repellents

|                                    |   |   |
|------------------------------------|---|---|
| <b>POLYGON P-357</b><br><b>NEW</b> | Waterproofs glass, ceramic and metal. Used as a drying aid and paint preservative in car care.  | Forms water-repellent protective coatings on all surfaces and regenerates embrittled paint surfaces. Free of hydrocarbon solvents, silicones and dimethyl-distearyl-ammonium chloride. Has an antistatic effect on plastics.                        |
| <b>POLYGON P-360</b>               | Ready-to-use formulation of a water repellent based on POLYGON PC 2357.   | 15% concentrate, can be diluted in a ratio of up to 1: 1000. Antistatic properties on plastic.  |
| <b>POLYGON P-366</b>               | Ready-to-use, water-dilutable concentrate of a hydrophobing agent with even faster water-absorbing properties. Can be used in car care. | Free from hydrocarbon containing solvents and distearyl dimethyl ammonium chloride. Can be made up to a commercial hydrophobing agent/drier by adding water and can be used directly by diluting it up to 1:1000. Antistatic properties on plastic. |
| <b>POLYGON P-409</b><br><b>NEW</b> | Concentrated water-repellent on a cationic basis with no environmentally hazardous classification. Free of silicones and microplastics. | Water repellents for paints and other surfaces. Can be made up by adding water to a commercially available water repellent / dryer or diluted 1:1000 to 1:2000, used directly. Antistatic properties on plastic.                                    |
| <b>POLYGON P-443</b>               | Hydrophobing agent for glass surfaces.  | Builds up easy-to-clean surfaces.   |

# Water Repellents & Hydrophilizing Agents

| PRODUCTNAME | APPLICATION AREA | DESCRIPTION |
|-------------|------------------|-------------|
|-------------|------------------|-------------|

## Hydrophilizing agents

|               |   |   |
|---------------|---|---|
| POLYGON W-666 | Gloss activating agent for highly efficient acid glossy dryers with a low COD (chemical oxygen demand).                                 | Replaces completely or partially organic acids such as citric acid, mixtures of carboxylic acids etc. good solubilizer for sparingly soluble non-foaming, non-ionic substances. Increases the cloud point more than regular hydrotropes. Reduces the consumption of non-ionic surfactants by up to 30%. Corrosion inhibiting.   |
| POLYGON W-844 | Additive for hydrophilizing surface modification.   | Exceptional wetting properties on any type of surface. Forms a coherent film of water that runs off without stains.   |
| POLYGON W-980 | Hydrophilic aqueous polymer that creates an invisible barrier on hard surfaces and a hydrophilic self-cleaning / easy-to-clean surface. | It is quickly absorbed by hard surfaces including clear coat, paint, glass, aluminum, steel, plastic, masonry and ceramic. Ensures spot-free drying and acts as an anti-fog agent in cleaning and treating agents for hard surfaces. Compatible with non-ionic, anionic, amphoteric and some cationic materials and works in neutral, acidic, alkaline and peroxide environments. |
